

Extremely sophisticated modular model applicable to Z & U Sheet Piles

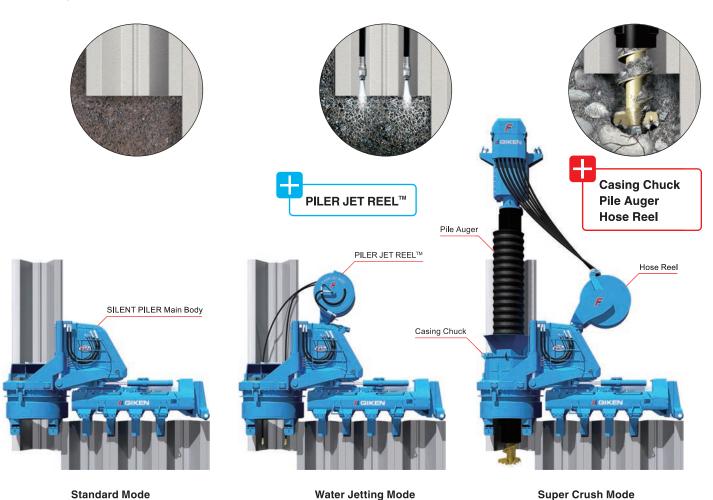

# SIENI PIER 7401 SILENT PILER™ F401

# **Flexible and Functional Formula**

The F401 features a new modular design developed by optimising all the parts and drastically modifying the structure, shape, and material. Not only are the main component parts more versatile, it is also equipped with a cutting-edge control system, and realising high functionality and longer operation life.

# **Optimising Work Efficiency with Modular Design**

SILENT PILER F401 is applicable to Standard, Water Jetting, and Super Crush press-in works by changing the chuck and chuck frame, and equipping attachments. The machine can be utilised more efficiently because it is adjustable to various soil conditions and working conditions.

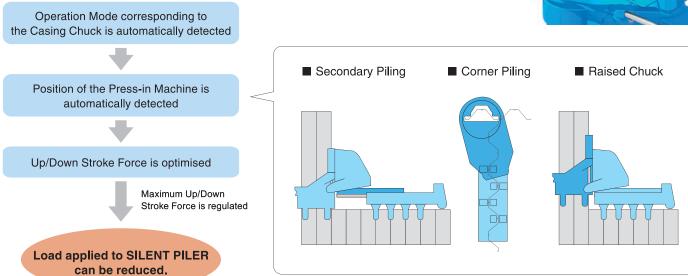

SPT N Values 25 50

## **New Control System**

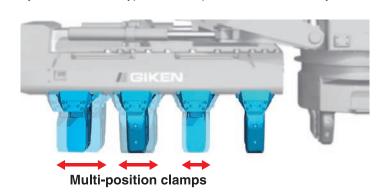

The new control system manages the position of the press-in machine and controls load generation from press-in work during operation, maximising the durability of each part. Also, control of the machine is remarkably improved by the Press-in Force Control System and the Phaseless Linear Auger Torque Control System.

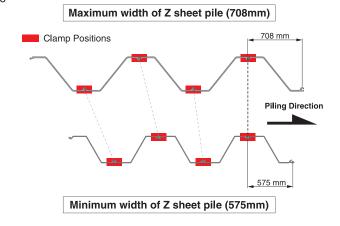

### **Multi-position clamps**

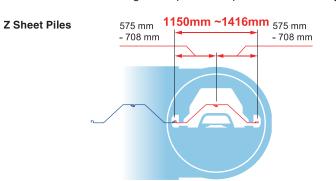

The clamp pitch is adjustable to multiple positions by using hydraulic system for over 40 types of sheet pile without disassembly.

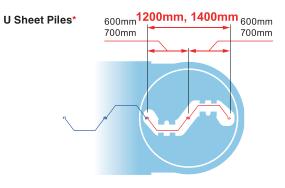

### For Wider Z & U Sheet Piles

The F401 has been designed to press-in 2 piles simultaneously up to a total width of 1416mm.

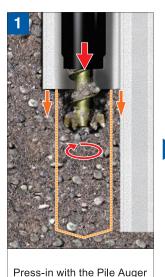

<sup>\*</sup> F401 is designed to Press-in a pair of 600mm and 700mm U sheet piles in pairs by using WU chuck attachment.

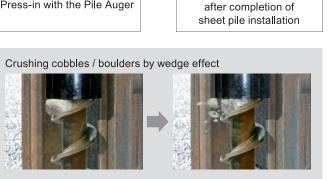

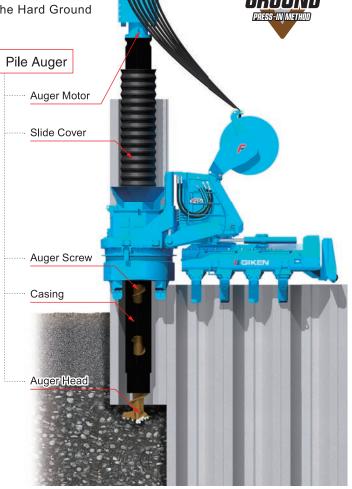

### 5 Pile Installation into Hard Ground

The "Pilot Coring Theory", GIKEN original theory, makes the Hard Ground Press-in Method able to install sheet piles into difficult ground conditions such as gravelly soil and cobble or boulder mixed soil without losing the advantages of the Press-in Method. The augering area can be reduced to assist pile installation, minimising volume of spoil and disturbance to the soil strata. Hence, high bearing capacity is available from sheet piles which are installed by the Hard Ground Press-in Method.

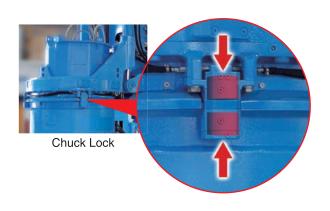

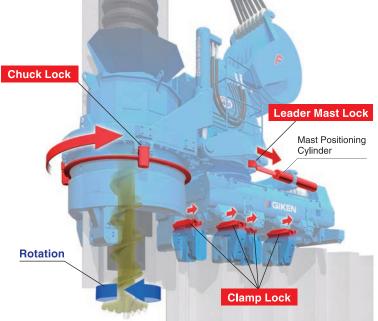

### **Locking Function**

Lock functions in the leader mast, chuck and clamps secure SILENT PILER against drilling torque and increase drilling efficiency and accuracy of pile installation.

### New Generation Power Unit EU300L5

#### **Low Emission Engine**

The Power Unit of the F401 is a new generation model and has environmentally-friendly specifications. It is designed with strict concepts for clean emissions with high combustion efficiency and GIKEN original hydraulic control technologies.

#### **Ultra Low Noise Level**

It clears allowable construction noise levels in many industrialised countries.

# Standard Application of Biodegradable Oil

The F401 uses bio-degradable PILER ECO™ OIL and PILER ECO Grease. Hence, if hydraulic oil or grease is spilled into soil or water, there will be no environmental damage to the surrounding ecosystem. In addition, the machines are painted with TX-Free non-leaded paint\*.

\* Environmentally-friendly paint which does not contain toluene, xylene and lead based pigment.

### 7 Scientific Execution of Press-in Work & Advanced IT Functions

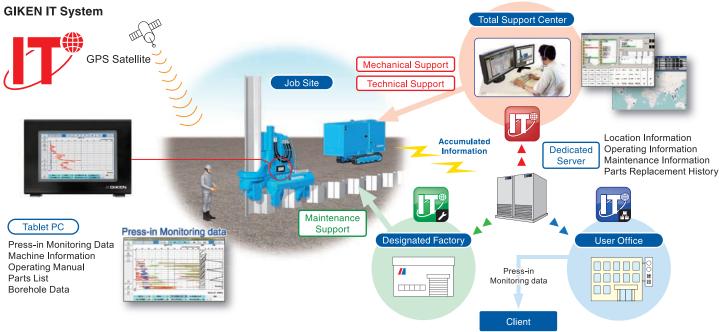

#### **GIKEN IT System**

GIKEN engineers can monitor individual SILENT PILER, such as operating condition, maintenance records and location. Quick advice for any technical troubles is available promptly and appropriate information can also be provided to prevent troubles.

\* The system is not available in the countries where authorisation for usage cannot be acquired.

#### **Press-in Monitoring and Data Logging System**

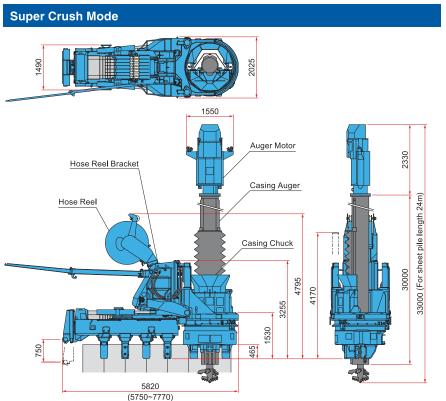

Press-in monitoring data can be used for quality control and information modelling of the foundation. Operators are able to keep working while checking data such as press-in force, auger torque, and working hours of press-in work, on a tablet or PC (both optional extras).
